Fix severe delays when loading Excel 2003 files from network drives

I was recently made aware of a problem where Excel 2003 would take several minutes to load a spreadsheet from a network drive. What made it even worse was that several of these sheets were referenced inside a CAD drawing (meaning AutoCAD would open Excel in the background for each spreadsheet referenced), and the load delay for each individual spreadsheet made it was near-impossible for the drawing to *ever* finish loading.

I found three possible solutions to the problem.

The first (which I used) was to create or modify the following registry key using `regedit`:

```
1  [HKEY_CURRENT_USER\Software\Microsoft\Office\11.0\Excel\Security\FileValidation]
2  "EnableOnLoad"=dword:00000000
```

The second option is to uninstall the Microsoft Office File Validation Add-in from the Control Panel.

The third is to upgrade to Excel 2007 or later.
